Esto nos permite el reconocimiento de diferencias iniciales en distintas fases

Cantidad de ADN

Este grafico nos permite identificar los cambios (incremento "rojo a verde" y reducci3n "verde a rojo") en la cantidad de ADN de 2C a 4C en periodos de S3ntesis del ADN y de 4C a 2C cuando la c3lula se divide durante la Mitosis

LAUTARO CORIA

Martina Perillo Panizzo

You

Hay grandes grupos de complejos ciclina-quinasa: Podemos dividir las flías de Ciclinas en ciclinas de G1; de S; Mitóticas

Tomar el concepto que diferentes ciclinas (A, B, C, D) y distintas kinasas dependientes de ciclinas (CDK 1, 2, 4, 6) en distintos momentos del ciclo celular tienen funciones regulatorias que controlan y permiten avanzar en las fases del ciclo celular.
