Compute Services

Service name	Service function
Azure Virtual Machines	Windows or Linux virtual machines (VMs) hosted in Azure
Azure Virtual Machine Scale Sets	Scaling for Windows or Linux VMs hosted in Azure
Azure Kubernetes Service	Enables management of a cluster of VMs that run containerized services
Azure Service Fabric	Distributed systems platform, Runs in Azure or on-premises
Azure Batch	Managed service for parallel and high-performance computing applications
Azure Container Instances	Run containerized apps on Azure without provisioning servers or VMs
Azure Functions	An event-driven, logic-driven, serverless compute service

T3P - Technology To The Point

Important Networking Terms

- **What's a network security group?**

A *network security group*, or NSG, allows or denies inbound network traffic to your Azure resources

- **What is VPN Gateway?**

A *VPN gateway* (or virtual network gateway), enables this scenario. It can provide a secure connection between an Azure Virtual Network and an on-premises location over the internet.

- **What is network latency?**

Latency refers to the time it takes for data to travel over the network. Latency is typically measured in milliseconds.

T3P - Technology To The Point

Situation:

- ❖ You need to ensure that when Azure Active Directory (Azure AD) users connect to Azure AD from the Internet by using an anonymous IP address, the users are prompted automatically to change their password.

Which Azure service should you use?

- ☐ Azure AD Connect Health
- ☐ Azure AD Privileged Identity Management
- ☐ Azure Advanced Threat Protection (ATP)
- ☐ Azure AD Identity Protection

Validation:

❖ If a resource group named RG10 has a delete lock, only a member of the global administrators group can delete RG1.

- ☐ No change is needed
- ☐ the delete lock must be removed before an administrator
- ☐ an Azure policy must be modified before an administrator
- ☐ an Azure tag must be added before an administrator
