ICT- Scout Sniper: Escape & Evasion

What will be covered in this presentation?

1.) Review Series Assignment – **What You Should Have Gleaned...**

A. ICT – Sniper Series Skill Set:

1. The Market Moves Only By Means Of Large Funds Entering & Exiting. Price Seeks Yield.
2. We Do Not Look To "predict" Price Moves – Rather Wait For Smart Money To Move Price Initially.
3. Typical Business Model In Trading – Moves In Repeating Fashion In Specific Times.

ICT- Scout Sniper: Escape & Evasion

What Analysis & Process Is Used On The Study Of The Daily Chart?

1.) The Macro-view on Large Funds & Order Flows

A. ICT – Daily Chart Timeframe Checklist:

1. The Market seeks "yield" and where yields are supplied there too is where Price will draw to.
2. Seasonal Tendencies are considered – They are not a panacea or a guarantee. More like a "map".
3. Look at obvious Key S&R levels. Note these with at minimum 2-3 years of data on screen.
4. Do not discount the levels acquired on the study of Weekly & Monthly charts. Odds builders.
5. Determine the current Market Structure. In what Swing are we trading in? LT – IT – ST
6. What are large funds doing and where is the Order Flow suggesting Price is trading up or down?
7. Overlaying the 9ema and 18ema for Buy & Sell Models is useful for directional bias.
 - i. When The 9ema > 18ema [9ema is above the 18ema] = Focus on Longs.
 - ii. When The 9ema < 18ema [9ema is below the 18ema] = Focus on Shorts.
8. Highlight Key Swing Lows & Swing Highs.
9. Note the three daily candles High – Low – Open – Close prices. These are sensitive Price Points.
10. Identify Major Reaction Levels where price obviously and strongly moves away from a level.
11. Highlight potential Order Blocks where price will possibly react in similar fashion.

ICT- Scout Sniper: Escape & Evasion

What Analysis & Process Is Used On The Study Of The 60min Chart?

1.) The Shortterm-view on Large Funds & Order Flows

A. ICT – 60min Chart Timeframe Checklist:

1. The Daily Analysis is kept in focus. We hold to this bias as our foundational basis for Trade Ideas.
2. Daily Analysis could be mixed – consult the 4hour perspective. Ideally Daily & 4hour will agree.
3. The Order Blocks on both Daily & 4hour will produce highest probability setups. Focus there 1st.
4. The Reaction Levels seen on the 60min chart will permit fine tuning Order Block selections.
5. Viewing the weekly perspective on a 60min basis will provide a good vantage point for swings.
6. Look for logical levels where retail traders and funds would possible have "Stops" resting near.
7. Use Market Structure concepts and Fibs to stalk possible confluences where setups will form.
8. The Day Of The Week theory is a rough idea where the weekly high or low is likely to form.
9. If we are Bullish & Hunting a weekly Long setup – Mon to Wed typically Weekly Low established.

ICT- Scout Sniper: Escape & Evasion

What Analysis & Process Is Used On The Study Of The 15 or 5min Chart?

1.) The Execution-view on Large Funds & Order Flows

A. ICT – 15 or 5min Chart Timeframe Checklist:

1. The Daily – 4hour – 60min perspective is maintained even while studying Price Action.
2. Have the days separated with vertical lines to highlight possible Day Of Week Theory.
3. Note the Asian Range high and low each day. 5 GMT is the end of Asian Range parameter.
4. Look for the Daily Highs to form in Sell Models between 7 GMT & 10 GMT.
5. Look for the Daily Lows to form in Buy Models between 7 GMT & 10 GMT.
6. Typically the daily High or Low is formed on a sharp counter-trend direction on that day. [Judas]
7. Stalk the setups – combine Time & Price Theory. Hunt inside time windows & Order Blocks.
8. Opposite Daily High or Low is formed inside the 15 GMT & 16 GMT hours. [London Close]
9. When Time & Price Theory overlap Trading Patterns will form. OTE – Harmonic – "Divergence".
10. Use fibs and Swing Projections to determine possible Price Objectives to form Risk:Reward.
11. Use fibs to fine tune entry points inside Order Blocks with London & New York ICT Killzones.
12. If the London Setup is missed or you were incorrect & stopped out – use 12 GMT to 14 GMT. [NYO]
13. Most of the time New York Open (NYO) – is a continuation setup on the heels of London's Action.
14. Avoid NYO setups if Daily Swings are maturing into Key S&R - NYO could produce reversals.
15. All trades should be limited to 1% risk of total account balance. Ideally while learning .25-.5% risk.
16. If a loss is taken reduce risk and leverage in half until the loss is recouped. Slow & Steady.
